TABLE TOP AND ACRYLIC MAINTENANCE

First and foremost, nothing is indestructible. Our tables are no different. However, we do take great care to provide as much protection as possible. The metal tops generally have our nano sealer applied to it and sometimes a layer of clear paste wax (BriWax) that curbs any normal wear and tear and moisture. We recommend applying a new coat once or twice a year. Instructions are on the can.

Things to avoid:

Direct exposure to very hot and very cold liquids and plates or glasses. This will leave a mark.

Leaving olive oil or salad dressing on the top for an extended period of time.

Not using coasters or placemats.

Taking an approach of treating the table with a general level of care will avoid almost all problems that may arise.

We recommend a plastic cleaner (Brilliance) to clean any acrylic. **DO NOT USE GLASS CLEANER.**

Simply wiping any dust or dirt off the acrylic with a soft rag will also work.

If you ever have any questions, please do not hesitate to contact us for help.
